Windows installer	1
Direct installation.....	5

Windows installer

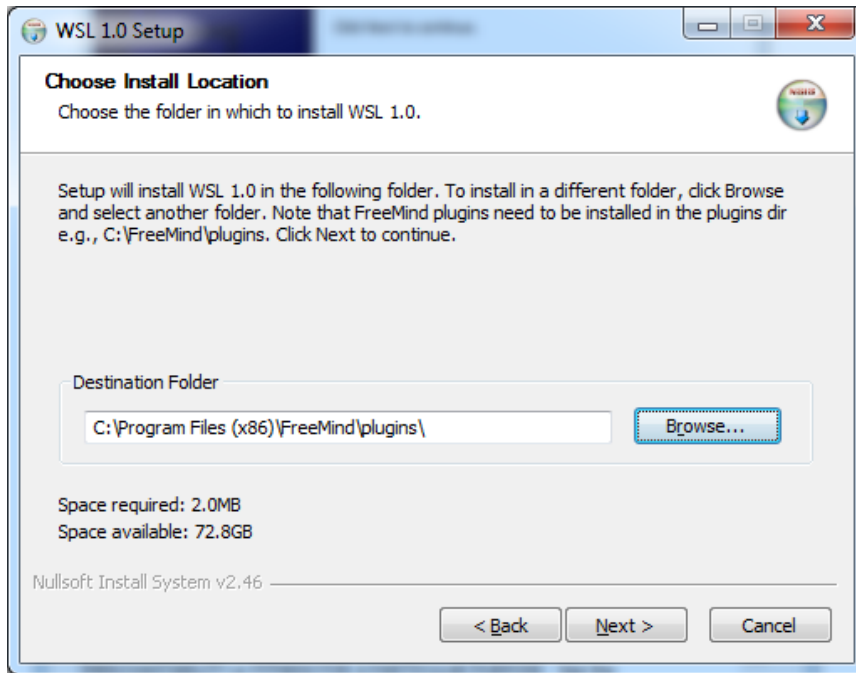

Double click in the installer and follow the screen instructions.

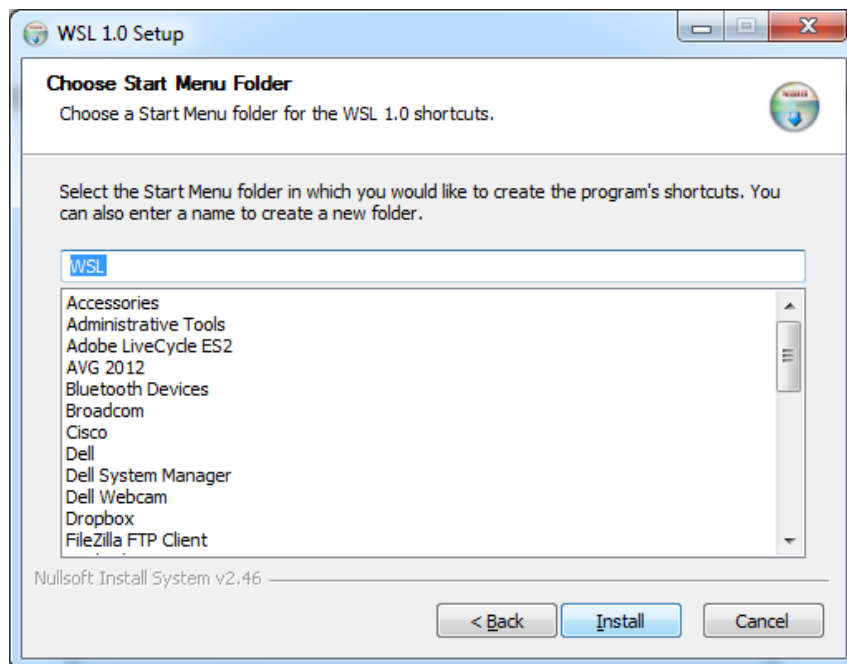

Accept the license agreement.

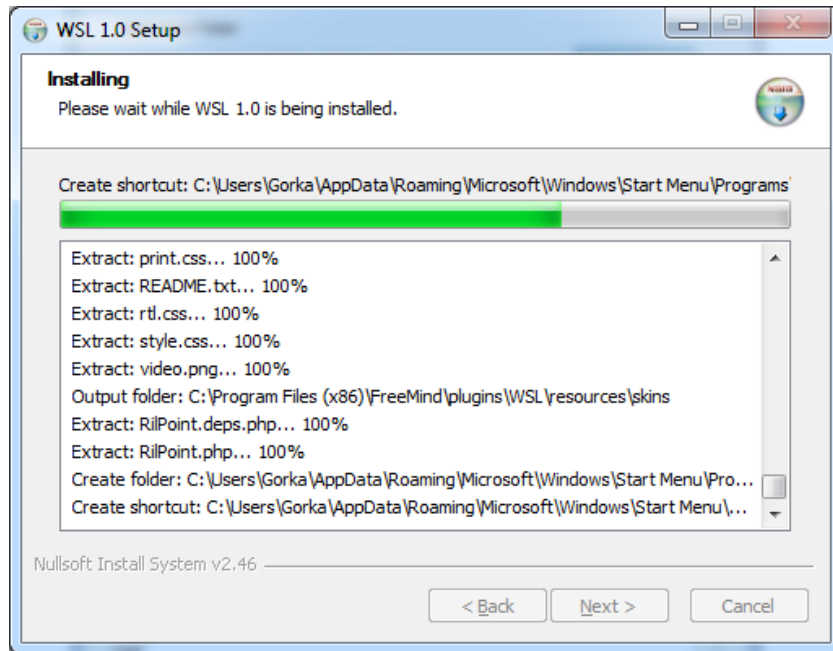

Choose the FreeMind plugins folder.

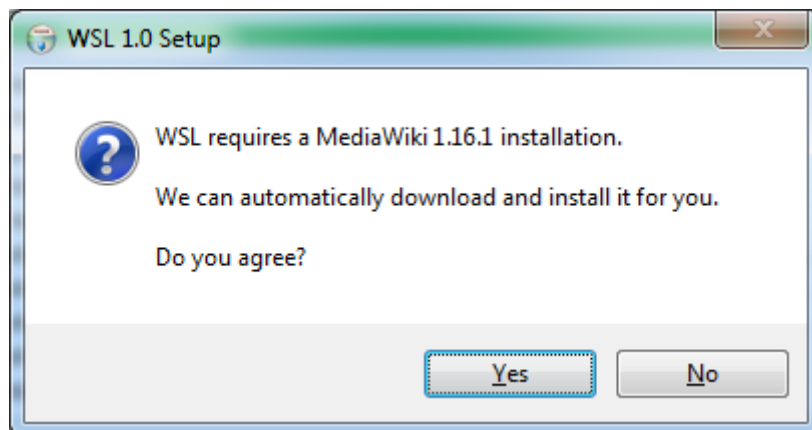

Select the start menu folder.

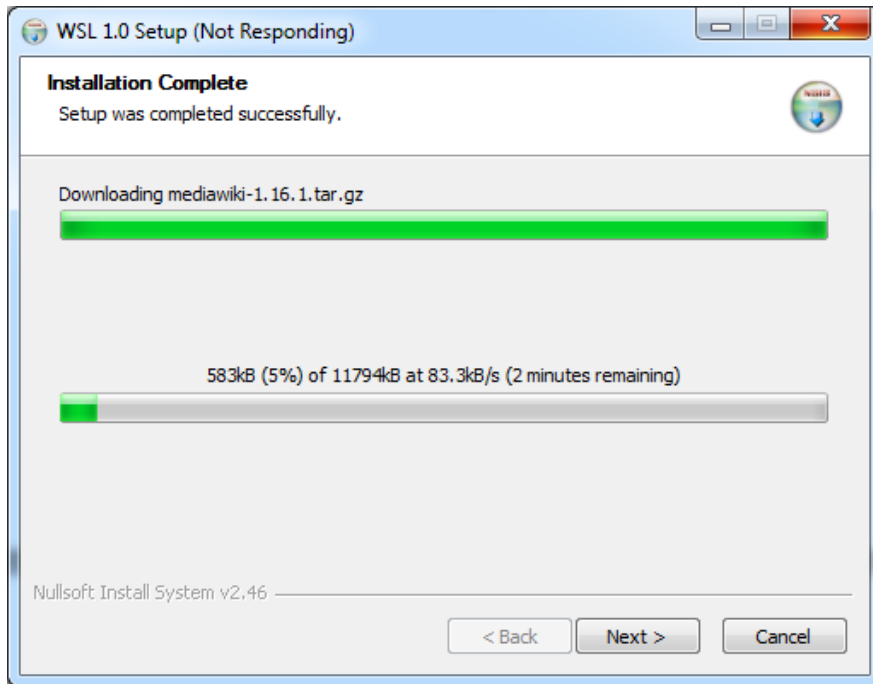

Wait while installing.

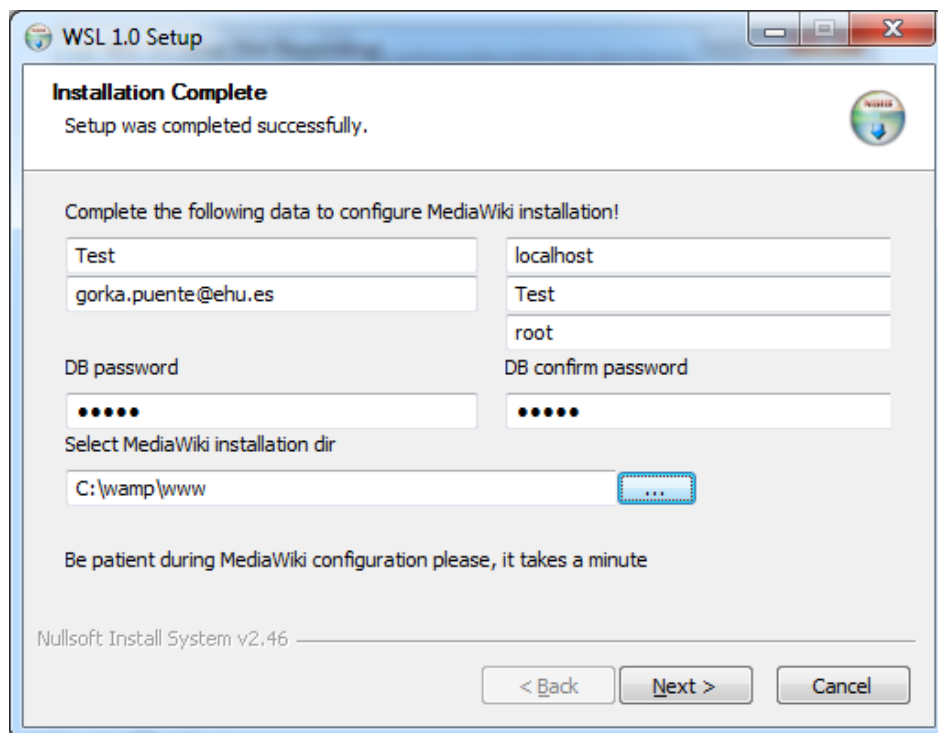

WSL requires an empty MediaWiki installation, download if needed.

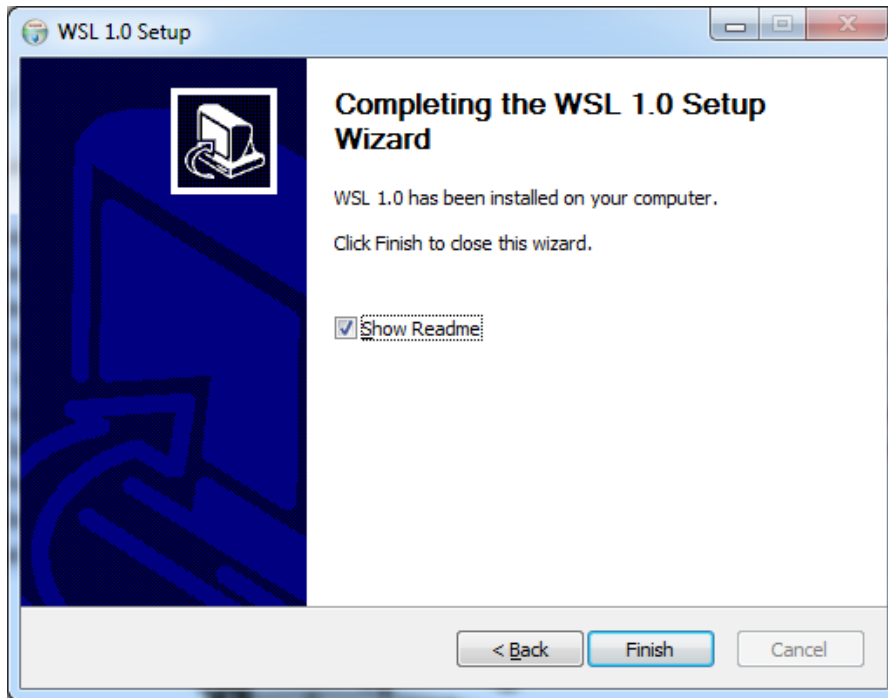

Important, wait while downloading even if not responding.

Complete the data to configure your new MediaWiki installation. The installation dir has to be a server deployment folder (in this case apache www). Be patient!

If something fails, check the previous steps. Read the README file.

Direct installation

Copy the content of the file directly to the FreeMind plugins folder.
